Purpose & Objective: At Financial Themes we believe it essential to monitor a broad range of Stockmarket Sentiment Indicators so that we can formulate our own view on how the various stockmarket participants are responding to ever changing market conditions. Knowing how to interpret this data is vital to our success and requires a high degree of counter intuitive thinking. We treat such information in a Contrarian fashion believing that when the general public; the financial media and investment advisors are all measurably very Bullish, we are usually approaching a "Market Top". When the inflow of Money is at its highest a correction will often follow. Whereas Sentiment and Money inflow are usually extremely low at a "Market Bottom". Timing such a correction can still prove difficult to predict and would recommend Sentiment Analysis should not be used in isolation. We use this data to support our multi-faceted approach towards research across all markets to aid and improve our decision process. The Sentiment Indication table (top right) plots each reading across															hion ection will d not be			
spectrum ranging from Positive to Negative. Whilst the table below offers a brief explanations on the 10 Indicators (5 Daily/5 Weekly) used to help formulate our overall assessment of Stockmarket Sentiment.																		
DAILY SENTIMENT READINGS										WEEKLY SENTIMENT READINGS								
<u>VIX</u> - Often referred to as the "Fear Gauge" this indicator is used to measure "Implied Volatility" via the pricing of ndex Options traded in the stockmarket. Specifically, the index is used to forecast future volatility in the month shead. In a Contrarian sense implied volatility will be very low at Market Tops and extremely high after a sharp										Investment Media - A weekly survey of the numerous articles by financial journalists where opinions as to the direction of stockmarkets can be recorded. High readings will appear when the majority of financial journalists advocate stockmarket investments as we approach a Market Top.								
Bull/Bear Ratio - Created by dividing the amount of money invested in funds which will profit if markets funds which will profit if markets fall. This usefully provides a measure of where sentiment lies. If the range high most investors expect the market to rise. Which implies there are few investors left to buy into the market into the sentence of the market to rise. Which implies there are few investors left to buy into the sentence of t									atio is very	Investment Advisors - Similar to the Investment Media, weekly Opinion Polls canvas Investment Advisors as to their outlook (and in turn their recommendations to their clients) regarding the stockmarket. Sadly their opinions, particularly when reaching extreme readings, are often wrong.								the
Money Market Ratio - This indicator measures the way in which private investors will transfer their hole Money Market funds when they fear stockmarkets will fall and will transfer out of MM funds when they stockmarkets to rise. The Money Market Ratio will be extremely low near a Market Top and vice versa.								-	<u>Private Investors</u> - Private Investor Opinion Polls are prolific within the Investment Community. completed by the keen amateur, they measure the private investor's opinion on Stockmarkets. Ranging from Bullish to Bearish they will often hit extreme readings as stockmarkets turn.							•		
<u>RSI Indicators</u> - These measure the chang normal price range to determine whethe Implying that the asset will likely correct.	er the asse	t is relati	vely too	strong	(i.e. too	high) or	r too we	ak (i.e	e. too low).	hold in	the Stock	kmarket within	the Fund(s)	neasures the ag they manage. there is little f	Viewed a	as an inverse	fuel gauge	for the

<u>Sage Stocks > 50 Divia</u> - A reliable indicator that measures the percentage number of stocks above their 50 Day Moving Average. A healthy market would see more than 50% of stocks above their 50 DMA. Extremely high/low readings would imply that stockmarkets have gone too far and usually a correction will take place.
